
Health Tech Product Manager Roadmap Action Kit

Portfolio templates, interview questions, resume formulas, and your 90-day execution plan.

What is inside this kit:

1. 90-Day Execution Plan with weekly milestones
2. Portfolio Project Templates with starter prompts
3. Resume Bullet Formulas that translate your clinical experience
4. Interview Preparation Questions specific to this role
5. Resource Checklist with direct links

Difficulty: High | Timeline: 6 to 12 months | Last Updated: 2026-03-24

Built by a pharmacist who made the switch. roadmaps.tarvra.com

1. Your 90-Day Execution Plan

This plan breaks the learning path into weekly milestones. Adjust the pace to fit your schedule, but try to maintain momentum. Consistency matters more than speed.

Phase 1: Foundation

Duration: 1 to 8

Effort: 48 to 80

Week	Focus Area	Done?
Week 1	PM Fundamentals: vision, strategy, roadmap, user research, prioritization fra...	☐
Week 2	Product Frameworks: Jobs to Be Done (JTBD), user personas, problem statements	☐
Week 3	Health Tech Market Landscape: types of companies, regulatory environment (HIP...	☐
Week 4	Basic Technical Literacy: APIs, EHRs, data flow, system integration concepts	☐

✓ **Phase Checkpoint:** Write a 1 to 2 page Health Tech Market Overview identifying 3 companies, their products, customers, and PM challenges.

Phase 2: Technical Depth

Duration: 8 to 24

Effort: 60 to 100

Week	Focus Area	Done?
Week 5	User Research: interviews, journey mapping, persona development, research syn...	☐
Week 6	Data Analytics for PMs: metrics, funnels, A/B testing, cohort analysis	☐
Week 7	Product Frameworks: OKRs, product strategy, competitive analysis, pricing models	☐

Week 8	Agile and Scrum: sprints, backlogs, estimation, retrospectives, PM role in Agile	☐
--------	--	--------------------------

✓ **Phase Checkpoint:** Conduct 5+ user interviews with clinicians. Write research synthesis. Create competitive analysis of 3 health tech products. Write a PRD for a hypothetical feature.

Phase 3: Specialization

Duration: 24 to 40

Effort: 80 to 140

Week	Focus Area	Done?
Week 9	Track A: Clinical Workflow Products (EHR features, provider-facing tools)	☐
Week 10	Track B: Patient-Facing Digital Health Apps (portals, remote monitoring, enga...	☐
Week 11	Track C: Population Health and Care Coordination Platforms	☐
Week 12	Track D: Regulatory and Compliance-Focused Products	☐

✓ **Phase Checkpoint:** 4 to 6 page product strategy case study demonstrating clinical domain expertise applied to chosen specialization.

2. Portfolio Project Templates

Each template gives you the project brief, tools needed, and starter prompts to begin immediately. Your clinical background is your competitive advantage.

Project 1: Clinical Workflow Optimization PRD

Time Estimate: 5 to 7 weeks

Interview 5+ nurses and pharmacists about medication reconciliation, map current workflow, identify friction, propose EHR feature with wireframe and success metrics.

Tools: User interviews, Workflow mapping, Wireframing, PRD writing

✓ **Your Clinical Advantage:** You know the actual workflow including workarounds, not the theoretical one

Starter Prompts (begin with these questions):

- What specific problem does this project solve for clinicians or patients?
- What data would I need, and what are the realistic constraints on getting it?
- How would I measure whether my solution actually works in a clinical setting?
- What would a hiring manager want to see in my write-up of this project?

Project 2: Patient Engagement Strategy

Time Estimate: 5 to 7 weeks

Conduct user interviews with patients on chronic disease management, analyze competitor engagement features, propose 2 to 3 engagement features with wireframes.

Tools: User interviews, Competitive analysis, Wireframing

✓ **Your Clinical Advantage:** You understand patient behavior change and what motivates adherence

Starter Prompts (begin with these questions):

- What specific problem does this project solve for clinicians or patients?
- What data would I need, and what are the realistic constraints on getting it?
- How would I measure whether my solution actually works in a clinical setting?
- What would a hiring manager want to see in my write-up of this project?

Project 3: Pharmacy Technology Feature Strategy

Time Estimate: 5 to 7 weeks

Map pharmacist MTM workflow end-to-end, identify time waste, propose software redesign with wireframes and business impact (especially for pharmacists).

Tools: Workflow mapping, User interviews, Wireframing, Business case

✓ **Your Clinical Advantage:** You have lived the MTM workflow and know where real bottlenecks are

Starter Prompts (begin with these questions):

- What specific problem does this project solve for clinicians or patients?
- What data would I need, and what are the realistic constraints on getting it?
- How would I measure whether my solution actually works in a clinical setting?
- What would a hiring manager want to see in my write-up of this project?

Project 4: Competitive Market Strategy

Time Estimate: 6 to 8 weeks

Analyze 4 to 5 competitors, conduct user research, identify white space, propose prioritized 12-month roadmap.

Tools: Competitive analysis, Market research, User interviews, Roadmap planning

✓ **Your Clinical Advantage:** You evaluate telehealth through clinical lens, not just business metrics

Starter Prompts (begin with these questions):

- What specific problem does this project solve for clinicians or patients?
- What data would I need, and what are the realistic constraints on getting it?
- How would I measure whether my solution actually works in a clinical setting?
- What would a hiring manager want to see in my write-up of this project?

Project 5: Regulatory Compliance PRD

Time Estimate: 5 to 7 weeks

Analyze regulatory requirements, assess current gaps, write PRD for HIPAA audit log feature or clinical data privacy with wireframes and rollout strategy.

Tools: Regulatory research, PRD writing, Wireframing

✓ **Your Clinical Advantage:** You understand compliance from the frontline, not just the legal department

Starter Prompts (begin with these questions):

- What specific problem does this project solve for clinicians or patients?
- What data would I need, and what are the realistic constraints on getting it?
- How would I measure whether my solution actually works in a clinical setting?
- What would a hiring manager want to see in my write-up of this project?

3. Resume Bullet Formulas

Use these formulas to translate your clinical experience into language hiring managers recognize. Each formula follows the pattern: Clinical Skill translated to Tech Equivalent with context.

For Nurses

Clinical: Patient and user triage assessment	Translates to: User research prioritization: structuring interviews, identifying which user segments have most critical pain points, prioritizing which problems product should solve first
<i>How to frame it:</i> Your triage skills apply directly to user research and problem prioritization	
Clinical: Care coordination and handoff documentation	Translates to: Stakeholder management: coordinating between engineering, design, clinical advisors, sales, legal while ensuring alignment through shared documentation
<i>How to frame it:</i> Your coordination skills translate directly to cross-functional product leadership	
Clinical: Workflow optimization from bedside efficiency	Translates to: Product process improvement: mapping current state workflows, identifying friction, designing features that eliminate bottlenecks
<i>How to frame it:</i> You already think about efficiency and user experience	
Clinical: Clinical evidence evaluation	Translates to: Data-driven decision making: reading A/B test results, funnel analysis, cohort retention data, distinguishing signal from noise
<i>How to frame it:</i> Your evidence evaluation translates to analytics interpretation	
Clinical: Patient safety advocacy	Translates to: User-centric product advocacy: pushing back on engineering estimates that create poor UX, questioning design decisions that ignore user research
<i>How to frame it:</i> Your safety advocacy becomes product advocacy	

For Pharmacists

Clinical: Medication therapy management

Translates to: Product requirements definition: evaluating appropriateness by considering diagnosis, comorbidities, contraindications, outcomes translates directly to writing PRDs with success criteria

How to frame it: Your MTM thinking applies to feature specification

Clinical: Drug information research and clinical literature review

Translates to: Competitive analysis and market research: synthesizing evidence on drugs becomes synthesizing competitor products and market trends

How to frame it: Your research skills apply to competitive intelligence

Clinical: Patient counseling and behavior change

Translates to: User adoption strategy: counseling patients on adherence translates to designing for behavior change, not just functionality

How to frame it: You understand what drives user behavior change

Clinical: Supply chain and inventory management

Translates to: Product operations and prioritization: managing drug availability and cost optimization becomes resource allocation and roadmap prioritization

How to frame it: Your supply chain thinking applies to product prioritization

Clinical: Regulatory and compliance navigation

Translates to: Healthcare regulatory product development: understanding FDA regulations and insurance rules means fluently knowing what is legally possible in product decisions

How to frame it: Your regulatory knowledge is a direct advantage

For Other Clinicians

Clinical: Clinical assessment and differential diagnosis

Translates to: Problem definition: systematic evidence evaluation becomes user research, root cause analysis, scoping product requirements

How to frame it: Your diagnostic thinking applies to problem definition

Clinical: Treatment planning

Translates to: Product roadmap and strategy: creating individualized treatment plans considering patient goals becomes creating product roadmaps considering user goals and business constraints

How to frame it: Your planning skills scale to product strategy

Clinical: Patient outcome measurement

Translates to: KPI definition and success metrics: tracking healing time and functional improvement becomes defining retention, engagement, clinical efficiency metrics

How to frame it: Your outcomes thinking applies to product metrics

Clinical: Interprofessional communication

Translates to: Cross-functional product leadership: translating medical complexity to non-medical audiences becomes translating technical complexity to non-technical stakeholders

How to frame it: You already navigate complex stakeholder groups

Clinical: Continuing education and evidence synthesis

Translates to: Strategic learning and competitive intelligence: staying current on healthcare policy, competitor moves, technology trends

How to frame it: You already synthesize complex information systematically

Resume Bullet Template:

[Action verb] + [what you did in clinical terms] + [translated to tech impact] + [quantified result if possible]

Example: "Designed and maintained medication safety dashboards tracking 12,000+ monthly dispensing events, reducing near-miss medication errors by identifying data anomalies in real-time reporting workflows."

4. Interview Preparation Questions

Technical Questions

Q1: Walk me through how you would write a PRD for a new medication reconciliation feature.

Your answer notes:

Q2: How do you prioritize features when you have competing requests from clinicians, administrators, and engineering?

Your answer notes:

Q3: Describe your approach to user research with clinicians. How is it different from consumer user research?

Your answer notes:

Q4: How do you define success metrics for a health tech product? Give a specific example.

Your answer notes:

Q5: What is your framework for evaluating build vs. buy decisions in healthcare?

Your answer notes:

Behavioral Questions

Q1: Tell me about a product decision you made where you had to balance clinical safety with user experience.

Your answer notes:

Q2: How do you handle a situation where engineering says a feature will take 6 months but leadership wants it in 6 weeks?

Your answer notes:

Q3: Describe a time you used your clinical background to catch a product requirement that the team missed.

Your answer notes:

Q4: How do you build credibility with engineering teams when you come from a clinical background?

Your answer notes:

Scenario Questions

Q1: User retention for your chronic disease app drops 70% after 30 days. How do you investigate and what do you propose?

Your answer notes:

Q2: A competitor just launched a feature your users have been requesting. How do you respond?

Your answer notes:

Q3: You have data showing a feature is underused, but clinician interviews say it is critical. How do you reconcile this?

Your answer notes:

5. Resource Checklist

Every resource mentioned in the roadmap, organized by learning phase. Check them off as you complete each one.

Phase 1: Foundation

Done ?	Resource	Type	Link
☐	Lenny Rachitsky Newsletter Start Here collection	FREE	https://www.lennysnewsletter.com/p/start-here
☐	Atlassian Agile Product Management Guide	FREE	https://www.atlassian.com/agile/product-manag...
☐	Maven: Technical Foundations for Product Managers	FREE	https://maven.com/tech-for-product/tech-funda...
☐	Reforge Product Management Foundations	PAID	https://www.reforge.com/courses/product-manag...

Phase 2: Technical Depth

Done ?	Resource	Type	Link
☐	Lenny's Newsletter Archive	FREE	https://www.lennysnewsletter.com/
☐	API Fundamentals for Product Managers on Maven	FREE	https://maven.com/emmanuel/api-pm-fundamentals
☐	Figma	FREE	https://www.figma.com/
☐	Jira free tier	FREE	https://www.atlassian.com/software/jira
☐	Reforge Product Strategy	PAID	https://www.reforge.com/courses/product-strat...

Phase 3: Specialization

Done ?	Resource	Type	Link
☐	Specialization research and case studies	PAID	https://www.lennysnewsletter.com/
