

Health Tech Product Manager Roadmap

Action Kit

Operate as the strategic bridge between clinician and patient users, business objectives, and engineering teams, directing what gets built, for whom, and why.

Difficulty	High
Timeline	6 to 12 months
Last Updated	2026-03-24

This action kit contains your 90-day execution plan, portfolio project templates, resume bullet formulas, interview preparation questions, and resource checklist.

Built by Ehoneah Obed | thetransmutation.substack.com | quiz.ehoneahobed.com

Section 1: 90-Day Execution Plan

This plan maps directly to your learning path phases. Each month has specific deliverables and checkpoints to keep you on track.

Month 1: Foundation

Hours: 48 to 80

- PM Fundamentals: vision, strategy, roadmap, user research, prioritization frameworks
- Product Frameworks: Jobs to Be Done (JTBD), user personas, problem statements
- Health Tech Market Landscape: types of companies, regulatory environment (HIPAA, FDA), key stakeholders
- Basic Technical Literacy: APIs, EHRs, data flow, system integration concepts

Checkpoint: Write a 1 to 2 page Health Tech Market Overview identifying 3 companies, their products, customers, and PM challenges.

Month 2: Technical Depth

Hours: 60 to 100

- User Research: interviews, journey mapping, persona development, research synthesis
- Data Analytics for PMs: metrics, funnels, A/B testing, cohort analysis
- Product Frameworks: OKRs, product strategy, competitive analysis, pricing models
- Agile and Scrum: sprints, backlogs, estimation, retrospectives, PM role in Agile
- PRD Writing and Product Requirements Definition
- Wireframing Basics: low-fidelity prototyping, understanding UX

Checkpoint: Conduct 5+ user interviews with clinicians. Write research synthesis. Create competitive analysis of 3 health tech products. Write a PRD for a hypothetical feature.

Month 3: Specialization

Hours: 80 to 140

- Track A: Clinical Workflow Products (EHR features, provider-facing tools)
- Track B: Patient-Facing Digital Health Apps (portals, remote monitoring, engagement)
- Track C: Population Health and Care Coordination Platforms
- Track D: Regulatory and Compliance-Focused Products
- Track E: Pharmacy and Medication Technology

Checkpoint: 4 to 6 page product strategy case study demonstrating clinical domain expertise applied to chosen specialization.

Section 2: Portfolio Project Templates

Each project below includes a dataset, tools, timeline, and your clinical advantage. Complete at least 2 to 3 of these for a competitive portfolio.

Project 1: Clinical Workflow Optimization PRD

Interview 5+ nurses and pharmacists about medication reconciliation, map current workflow, identify friction, propose EHR feature with wireframe and success metrics.

Tools User interviews, Workflow mapping, Wireframing, PRD writing

Time Estimate 5 to 7 weeks

Clinical Advantage: You know the actual workflow including workarounds, not the theoretical one

Project 2: Patient Engagement Strategy

Conduct user interviews with patients on chronic disease management, analyze competitor engagement features, propose 2 to 3 engagement features with wireframes.

Tools User interviews, Competitive analysis, Wireframing

Time Estimate 5 to 7 weeks

Clinical Advantage: You understand patient behavior change and what motivates adherence

Project 3: Pharmacy Technology Feature Strategy

Map pharmacist MTM workflow end-to-end, identify time waste, propose software redesign with wireframes and business impact (especially for pharmacists).

Tools Workflow mapping, User interviews, Wireframing, Business case

Time Estimate 5 to 7 weeks

Clinical Advantage: You have lived the MTM workflow and know where real bottlenecks are

Project 4: Competitive Market Strategy

Analyze 4 to 5 competitors, conduct user research, identify white space, propose prioritized 12-month roadmap.

Tools Competitive analysis, Market research, User interviews, Roadmap planning

Time Estimate 6 to 8 weeks

Clinical Advantage: You evaluate telehealth through clinical lens, not just business metrics

Project 5: Regulatory Compliance PRD

Analyze regulatory requirements, assess current gaps, write PRD for HIPAA audit log feature or clinical data privacy with wireframes and rollout strategy.

Tools Regulatory research, PRD writing, Wireframing

Time Estimate 5 to 7 weeks

Clinical Advantage: You understand compliance from the frontline, not just the legal department

Section 3: Resume Bullet Formulas

Use these formulas to translate your clinical experience into language that resonates with hiring managers in health data roles. Replace bracketed text with your specifics.

Nursing Background

- Leveraged [clinical skill: Patient and user triage assessment] to deliver [tech outcome: User research prioritization: structuring interviews, identifying which user segments have most critical pain points, prioritizing which problems product should solve first], resulting in [quantified impact].
- Leveraged [clinical skill: Care coordination and handoff documentation] to deliver [tech outcome: Stakeholder management: coordinating between engineering, design, clinical advisors, sales, legal while ensuring alignment through shared documentation], resulting in [quantified impact].
- Leveraged [clinical skill: Workflow optimization from bedside efficiency] to deliver [tech outcome: Product process improvement: mapping current state workflows, identifying friction, designing features that eliminate bottlenecks], resulting in [quantified impact].
- Leveraged [clinical skill: Clinical evidence evaluation] to deliver [tech outcome: Data-driven decision making: reading A/B test results, funnel analysis, cohort retention data, distinguishing signal from noise], resulting in [quantified impact].

Pharmacy Background

- Leveraged [clinical skill: Medication therapy management] to deliver [tech outcome: Product requirements definition: evaluating appropriateness by considering diagnosis, comorbidities, contraindications, outcomes translates directly to writing PRDs with success criteria], resulting in [quantified impact].
- Leveraged [clinical skill: Drug information research and clinical literature review] to deliver [tech outcome: Competitive analysis and market research: synthesizing evidence on drugs becomes synthesizing competitor products and market trends], resulting in [quantified impact].
- Leveraged [clinical skill: Patient counseling and behavior change] to deliver [tech outcome: User adoption strategy: counseling patients on adherence translates to designing for behavior change, not just functionality], resulting in [quantified impact].
- Leveraged [clinical skill: Supply chain and inventory management] to deliver [tech outcome: Product operations and prioritization: managing drug availability and cost optimization becomes resource allocation and roadmap prioritization], resulting in [quantified impact].

Other Clinical Background

- Leveraged [clinical skill: Clinical assessment and differential diagnosis] to deliver [tech outcome: Problem definition: systematic evidence evaluation becomes user research, root cause analysis, scoping product requirements], resulting in [quantified impact].
- Leveraged [clinical skill: Treatment planning] to deliver [tech outcome: Product roadmap and strategy: creating individualized treatment plans considering patient goals becomes creating product roadmaps considering user goals and business constraints], resulting in [quantified impact].
- Leveraged [clinical skill: Patient outcome measurement] to deliver [tech outcome: KPI definition and success metrics: tracking healing time and functional improvement becomes defining retention,

engagement, clinical efficiency metrics], resulting in [quantified impact].

- Leveraged [clinical skill: Interprofessional communication] to deliver [tech outcome: Cross-functional product leadership: translating medical complexity to non-medical audiences becomes translating technical complexity to non-technical stakeholders], resulting in [quantified impact].

Pro Tip: Always quantify. Instead of 'analyzed data,' write 'analyzed 50,000+ claims records to identify \$2.3M in recoverable overpayments.'

Section 4: Interview Preparation Questions

Practice these role-specific questions. For each, prepare a 2-minute answer that highlights both your technical skills and clinical background.

Technical Questions

1. How would you write a PRD for a clinical decision support feature in a health tech product?
2. How do you prioritize features when you have competing requests from clinicians, payers, and compliance teams?
3. Describe how you would validate a product hypothesis with clinical end-users before building.
4. How would you measure the success of a health tech product launch?
5. Walk me through how regulatory requirements (HIPAA, FDA SaMD) influence your product roadmap decisions.

Behavioral Questions

1. Tell me about a time your clinical background gave you an insight that changed a product direction.
2. How do you handle a situation where engineering says a clinically important feature is technically infeasible?
3. Describe how you build relationships with clinical stakeholders who are skeptical of technology.
4. How do you balance moving fast with the safety requirements of healthcare?

Scenario Questions

1. A key customer (large health system) requests a feature that would benefit them but not your broader user base. How do you handle this?
2. Your product has a patient safety incident reported. Walk me through your response.
3. You need to sunset a feature that 15% of users rely on heavily. What is your approach?

Section 5: Resource Checklist

Use this checklist to track your progress through all recommended resources.

Certifications

Certification	Signal	Cost	Timeline
Certified Scrum Product Owner (CSPO)	Helpful	\$500 to \$700 (2 to 3 day course)	15 to 20% of health tech PM postings
SAFe Product Owner and Product Manager (SAFe POPM)	Helpful	\$400 to \$600	15 to 20% of postings
Reforge Courses	Helpful	\$500 to \$900 per course	No credential but widely respected by hiring managers
Product School or General Assembly Bootcamp	Helpful	\$3,000 to \$15,000	5 to 10% of postings mention PM training
Health Informatics Masters	Helpful	\$15,000 to \$50,000	Appears in some advanced PM postings
CCRPS (Clinical Research Project Manager)	Helpful	\$500 to \$1,000	Only relevant for clinical trial products

Your First Three Moves

Map your clinical assets (2 to 3 hours)

- Write a 1-page document identifying which clinical workflows you deeply understand
- Note what frustrated you most about them
- Identify which health tech products touch those workflows
- Describe how you would have designed them differently

Conduct one user research interview (1 to 2 hours)

- Find one clinician or patient
- Conduct 30 to 45 minute Jobs to Be Done interview about a workflow or product they use
- Document what you learned and what surprised you
- This starts building your research muscle and generates data for portfolio projects

Start PM foundations learning (2 hours to begin)

- Subscribe to Lenny Rachitsky's Newsletter and read the Start Here collection (free)
- OR enroll in Maven's Technical Foundations for Product Managers (free 8-day email course)
- OR research the next Reforge cohort start date
